Plenary Session
A New Apocalypse: Floods, Droughts, and Turmoil of the 21st Century
William Hooke ................................................................. 3
Western Water Law and the ESA: Managing Unnatural Hydrologic Extremes
Martha Pagel ............................................................. 15
A Perspective on Perspectives: Fluctuation and Change in Climate Extremes
Abstract by Kelly Redmond .................................................. 25
Drought Risk Management and Policy Trends in the United States
Donald Wilhite .............................................................. 27
Regional Growth Management & Urban Floodplain and Hydrology Management:
Making the Land Use Connection
Mike Houck ................................................................. 33

Climate Change
Assessing Hydrologic Impacts of Climate Change at a Watershed Scale
Abstract by Heejun Chang ....................................................... 37
Modeling Streamflows in Present and Future Climates -- Examples from
Rainfall/Snowmelt Streams in Coastal British Columbia
Paul Whitfield, Alex Cannon, Jon Wang, and Christopher Reynolds .................................. 41
New Mexico Climate and Hydrology: Is the Historic Record Valid for Predictive Modeling?
Karen Lewis and Deborah Hathaway .................................................. 57

Water Quality
Relation Between Climate Variability and Stream Water Quality in the Continental United States
Aldo Vecchia ................................................................. 77
Understanding How Extremes Influence Water Quality: Experience from Forest Watersheds
George Ice and Stephen Schoenholtz .................................................. 99

Ground Water
Hydrogeologic and Isotopic Study of the Groundwater Resources of the Hueco Bolson Aquifer El Paso, Texas/Juárez, Mexico Area
Barry Hibbs, Fred Phillips, James Hogan, Chris Eastoe, John Hawley, Alfredo Granados, and Bill Hutchison .................................................. 109

Water Temperature
Mapping Stream Temperature Patterns in the Mad River in Central Washington
Russell Faux and Philip Archibald .................................................. 123
Year-to-Year Variation in Stream Temperature and Implications for Water Quality Criteria
Don Essig ................................................................. 135
Improvements in Stream Temperature Assessment
Matthew Boyd and Brian Kasper .................................................. 149
### Water Temperature (cont.)

**Evaluation of Water Temperature Regimes in the Snake River using Transect Measurements and the RBM10 Model**

Ben Cope

---

**The Bull Run River-Reservoir System Model**

Robert Annear and Scott Wells

---

**A Statistical Model for Estimating Stream Temperatures in Central Idaho**

Mary Donato

---

**Modeling Uncertainty: Quicksand for Water Temperature Modeling**

John Bartholow

---

### Riparian Processes

**Modeling Hydrologic and Biogeochemical Functions of Riparian Zones: Questions, Challenges, and Future Directions**

Shreeram Inamdar

---

**Montane Wetland Hydrochemistry: Uinta Mountains, Utah**

Marek Matyjasik, Richard L. Ford, and Nancy Keate

---

### Floods

**Seasonal Mechanisms of Peak Flows and Flood Frequency at ReynoldsCreek, Idaho**

Tracie Kirkham and Marvin Pyles

---

**Detection of Flood Disturbance and Relaxation in the Lower Umatilla River, Oregon**

Michael Hughes

---

**Fluvial Indicators of Hyperconcentrated Flows - With Application to the Floods on Mars**

Josh Wyrick

---

### Droughts

**The U.S. Drought Monitor: An Integrated Approach to Drought Early Warning**

Don Wilhite

---

**National Drought Policy, Regional and Local Implementation**

Ane Deister

---

**Development of a Drought Mitigation plan for Tampa Bay, Florida**

Alison Adams, Wendy Nero, and Sanjay Puranik

---

**Water Supply Forecasting in the Upper Klamath Lake Basin during the 2001 Drought**

Jolyne Lea

---

### Forest and Watershed Conditions

**Water Sediment Transport and Soil Disturbance after Postfire Logging**

James McIver

---

**Lessons Learned about Watershed Assessments**

George Ice and Mary Ann Reiter

---

**Discriminating between Landslide Sites and Adjacent Terrain using Topographic Variables**

Jeremy Appt, Arne Skaugset, Marvin Pyles, and Michael Wing
Mitigation and Modeling

Artificial Neural Networks for Predicting Flood Stages in Urban Streams
Jun Han, Jy Wu, and Mark Senior ..........................................................375

Channel Modifications and Ecosystem Restoration in the Columbia Slough, Portland, Oregon
David Crawford ......................................................................................387

GIS Supported Hydrology in a Small, Forested Karst Watershed
Warren Campbell, Matthew Lumsdon, Sean Davies, and Billy Smith........393

Paper not presented at the 2002 AIH Annual Meeting:
Criteria for Evaluating Watershed Models
Craig Loehle and George Ice.................................................................403
